

600 Summer Street Recognized for Superior Technological Infrastructure

600 Summer Street Achieves Coveted Platinum Wired Certification for Best-In-Class Internet Connectivity

Stamford, CT (September 1, 2020) – 600 Summer Street located in Stamford, CT, has achieved the designation of Wired Certified Platinum and is the first Wired Certified Platinum in Connecticut. The designation was assigned upon review of the building’s best-in-class connectivity, technological infrastructure, and readiness to adopt emerging technologies.

WiredScore is the pioneer behind the Wired Certification standard that evaluates and distinguishes best-in-class Internet connectivity in commercial buildings. The Wired Certification is a standard trusted by tenants internationally to verify that buildings have been independently evaluated and certified to provide the Internet infrastructure that businesses require to thrive.

In pursuing Wired Certification, NEIP’s 600 Summer Street was subjected to a scrupulous certification process conducted by a team of leading technicians. Upon completion of an intensive on-site audit that evaluates a building’s number of available internet service providers, infrastructure redundancy, connection access points, and readiness to improve connectivity, a Wired Certification level is assigned based on the official standards developed by WiredScore and its advisory board.

600 Summer Street has indicated the presence of highly advanced technological infrastructure that is essential for reliable, redundant Internet connections, thus earning it a Wired Certified Platinum designation. This certification was given based on the building’s ability to provide tenants with features of connectivity that matter most to tenants: fiber cabling that is easily accessible throughout the whole building for simplified service turn-ups, numerous high speed internet service providers, diverse points of entry to mitigate the risk of internet outage and conduit capacity for future growth, and protected telecom rooms to minimize interruptions, with capacity for future installations.

600 Summer Street is owned and managed by New England Investment Partners whose principals are Jon Marcus and Ari Yasgur.

“We are extremely proud that we have achieved this coveted Platinum level certification. Becoming the first building in the state to reach this prestigious recognition is a significant moment for us, and will ensure that all of our tenants in the building have access to the best in class internet and connectivity” said Yasgur.

Added Marcus, "Even before the global pandemic started, we have made it our priority to ensure our tenants have cutting edge digital connectivity at our locations to ensure they can operate on the highest levels. We are proud to partner with WiredScore to make this a reality."

About WiredScore

WiredScore is the organization behind Wired Certification, the internationally recognized digital connectivity rating system for commercial real estate that helps landlords design and promote their buildings' great digital connectivity to tenants.

Wired Certification champions cutting-edge technology in commercial real estate by providing the only certification for rating the infrastructure, connectivity, and technological capacity of commercial buildings. WiredScore launched Wired Certification in 2013 in partnership with Mayor Bloomberg and the City of New York; in October of 2017, an investment group led by [Bessemer Venture Partners](#) and [Fifth Wall Ventures](#) acquired the company's majority share.

Since launch, more than 500MM square feet of commercial real estate in more than 2,000 buildings has been Wired Certified globally including buildings owned by premier landlords such as Blackstone, Brookfield, and Hines. International demand for the digital connectivity rating system has seen the company expand operations to the United Kingdom, France, Germany and Canada.

In an increasingly tech-driven economy, connectivity is fast becoming the most critical factor for tenants when selecting office space. The widely recognized Wired Certification seal is a trusted symbol that identifies buildings that have been independently certified to provide the best-in-class connectivity infrastructure that businesses require to thrive.
